

Spam Filter Test Cases

Semen Cirit

June 19, 2009

1. After installing the related package.
2. Open Kmail then add activate this spam filter.
 - 2.1. Click tools → Anti-Spam Wizard.
 - 2.2. Select the related spam filter that you installed.
 - 2.3. Right click on to a mail then select from the combobox Apply Filter → Filter Classify as Spam Observe that this mail goes to related spam folder.(The default spam folder is trash.)
 - 2.4. Download the gtube.txt from:

<http://spamassassin.apache.org/gtube/>

- 2.5. Execute this command:

`cat gtube.txt | spamc`

This command will give you an output like this:

If your spam filter supports it, the GTUBE provides a test by which you can verify that the filter is installed correctly and is detecting incoming spam. You can send yourself a test mail containing the following string of characters (in upper case and with no white spaces and line breaks):

XJS*C4JDBQADN1.NSBN3*2IDNEN*GTUBE-STANDARD-ANTI-UBE-TEST-EMAIL*C.34X

You should send this test mail from an account outside of your network.

- 2.6. Then copy the above part and send it to yourself.
Observe that this mail directly goes to related spam folder.
