Testing Guide for Pardus Alfa and Beta Versions

Semen Cirit

June 19, 2009

Attention!

During the test you may change, remove, or create new disk partitions of your computer. Before starting the tests you may want to back up your archives.

If you have one more than test machine you have to send the test results for each machine.

For each failed test result, you should report a bug to pardus bugzilla.

Note: For each bug report please use the bug report template which is exist in *efficient-bug-report.pdf* with related detailed descriptions and attachments.

1. Preparation

   1.1. Download the related ISO image.

   1.2. Check the data integrity with executing this command.

   ```
   # sha1sum <iso_image>
   ```

   1.3. Burn the ISO image on mode DAO and with maximum 16x speed.

2. Tests

   !!!For some testcases you have to be root in order take the outputs from the console.

   Please apply the following tests cases in this order:

   - YALI
   - Kaptan
   - Network Manager
   - Package Manager
   - History Manager
   - Boot Manager
   - Disk Manager
   - User manager
   - Service Manager
   - Firewall Manager
